learntci: Using Technology with Classroom Instruction That Works Howard Pitler, Elizabeth R. Hubbell, Matt Kuhn, 2012-08-02 Technology is ubiquitous, and its potential to transform learning is immense. The first edition of *Using Technology with Classroom Instruction That Works* answered some vital questions about 21st century teaching and learning: What are the best ways to incorporate technology into the curriculum? What kinds of technology will best support particular learning tasks and objectives? How does a teacher ensure that technology use will enhance instruction rather than distract from it? This revised and updated second edition of that best-selling book provides fresh answers to these critical questions, taking into account the enormous technological advances that have occurred since the first edition was published, including the proliferation of social networks, mobile devices, and web-based multimedia tools. It also builds on the up-to-date research and instructional planning framework featured in the new edition of *Classroom Instruction That Works*, outlining the most appropriate technology applications and resources for all nine categories of effective instructional strategies: * Setting objectives and providing feedback * Reinforcing effort and providing recognition * Cooperative learning * Cues, questions, and advance organizers * Nonlinguistic representations * Summarizing and note taking * Assigning homework and providing practice * Identifying similarities and differences * Generating and testing hypotheses Each strategy-focused chapter features examples—across grade levels and subject areas, and drawn from real-life lesson plans and projects—of teachers integrating relevant technology in the classroom in ways that are engaging and inspiring to students. The authors also recommend dozens of word processing applications, spreadsheet generators, educational games, data collection tools, and online resources that can help make lessons more fun, more challenging, and—most of all—more effective.

learntci: *The Horse, the Wheel, and Language* David W. Anthony, 2010-07-26 Roughly half the world's population speaks languages derived from a shared linguistic source known as Proto-Indo-European. But who were the early speakers of this ancient mother tongue, and how did they manage to spread it around the globe? Until now their identity has remained a tantalizing mystery to linguists, archaeologists, and even Nazis seeking the roots of the Aryan race. *The Horse, the Wheel, and Language* lifts the veil that has long shrouded these original Indo-European speakers, and reveals how their domestication of horses and use of the wheel spread language and transformed civilization. Linking prehistoric archaeological remains with the development of language, David Anthony identifies the prehistoric peoples of central Eurasia's steppe grasslands as the original speakers of Proto-Indo-European, and shows how their innovative use of the ox wagon, horseback riding, and the warrior's chariot turned the Eurasian steppes into a thriving transcontinental corridor of communication, commerce, and cultural exchange. He explains how they spread their traditions and gave rise to important advances in copper mining, warfare, and patron-client political institutions, thereby ushering in an era of vibrant social change. Anthony also describes his fascinating discovery of how the wear from bits on ancient horse teeth reveals the origins of horseback riding. *The Horse, the Wheel, and Language* solves a puzzle that has vexed scholars for two centuries--the source of the Indo-European languages and English--and recovers a magnificent and influential civilization from the past.

learntci: *The Oxford Handbook of Neolithic Europe* Chris Fowler, Jan Harding, Daniela Hofmann, 2015-03-26 The Neolithic --a period in which the first sedentary agrarian communities were established across much of Europe--has been a key topic of archaeological research for over a century. However, the variety of evidence across Europe, the range of languages in which research is carried out, and the way research traditions in different countries have developed makes it very difficult for both students and specialists to gain an overview of continent-wide trends. *The Oxford Handbook of Neolithic Europe* provides the first comprehensive, geographically extensive, thematic overview of the European Neolithic --from Iberia to Russia and from Norway to Malta --offering both a general introduction and a clear exploration of key issues and current debates surrounding evidence and interpretation. Chapters written by leading experts in the field examine topics such as the movement of plants, animals, ideas, and people (including recent trends in the application of genetics and isotope analyses); cultural change (from the first appearance of farming to the first metal artefacts); domestic architecture; subsistence; material culture; monuments; and burial and other treatments of the dead. In doing so, the volume also considers the history of research and sets out agendas and themes for future work in the field.

learntci: *Chasing Chariots* André J. Veldmeijer, alima Ikram, 2013-12-01 The present work is the result of the First International Chariot Conference, jointly organised by the Netherlands-Flemish Institute in Cairo (NVIC) and the American University in Cairo (AUC) (30 November to 2 December 2012). The intention of the conference was to make a broad assessment of

the current state of knowledge about chariots in Egypt and the Near East, and to provide a forum for discussion. A wide variety of papers are included, ranging from overviews to more detailed studies focusing on a specific topic. These include philology, iconography, archaeology, engineering, history, and conservation. The book is of interest to scholars as well as anyone with an interest in ancient technology, transportation, or warfare.

learntci: Valley Forge Richard Ammon, 2005-11-23 The odds were against George Washington as he marched the defeated Continental army toward an old ironworks known as Valley Forge. After losing two important battles, the untrained and poorly equipped soldiers now faced winter. With no quarters, little food, and few supplies, how could they survive? Yet over the freezing winter of 1777-78, the Continental army transformed itself from a ragtag outfit into a professional army. Valley Forge tells how inspiration, determination, and a genius for organizing enabled Washington, his talented staff, and his courageous soldiers to overcome extreme hardships and remake the army.

learntci: Purple Mountain Majesties Barbara Younger, 2002 In the summer of 1893, a young professor named Katherine Lee Bates took a train west from Massachusetts to Colorado. On her trip, she saw the beauty and the grandeur of our nation - its mountains, fertile prairies, and shining seas - and was moved to compose a poem that would later be set to music and stir generations to come. Glowing paintings and lyrical text blend together to show the magnificence of the United States of America and how it inspired Katherine Lee Bates to pen the poem that would become our nation's unofficial anthem.

learntci: Selected Writings on Chariots and other Early Vehicles, Riding and Harness M.A. Littauer, Joost Crouwel, 2021-11-22 This collection of papers is primarily concerned with transport by wheeled vehicle in antiquity. They shed much light on the construction of the vehicles, the ways their draught animals were harnessed and controlled, and the uses to which the equipages were put. The evidence discussed includes actual remains of vehicles and bridles, as well as figured and textual documents. Ridden animals and their gear also feature in this collection of papers. The Selected Writings of Mary B. Littauer and Joost H. Crouwel are important for all those interested in the cultures of the ancient Near East, Egypt and Cyprus and of Bronze Age Greece.

learntci: The Origin of the Indo-Iranians Elena Efimovna Kuz'mina, 2007 Here then is the fruit of Elena Kuz'mina's life-long quest for the Indo-Iranians. Already its predecessor (*Otkuda prishli indoarii?*, published in 1994) was considered the most comprehensive analysis of the origins of the Indo-Iranians ever published, but in this new, significantly expanded edition (edited by J.P. Mallory) we find an encyclopaedic account of the Andronovo culture of Eurasia. Taking its evidence from archaeology, linguistics, ethnology, mythology, and physical anthropology pertaining to Indo-Iranian origins and expansions, it comprehensively covers the relationships of this culture with neighboring areas and cultures, and its role in the foundation of the Indo-Iranian peoples.

learntci: The Charioteer of Delphi Caroline Lawrence, 2010-12-09 September AD 80. Flavia and her friends go to Rome to celebrate the Festival of Jupiter at Senator Cornix's town house. When a famous racehorse goes missing, Nubia sets out to recover it. The four friends find themselves caught up in a plot against one of the rival factions, the Greens. Who is trying to sabotage the charioteers? Could it be an inside job, or someone with a grudge from long ago? And how many men and horses will die before the killer is caught?

learntci: Chariots and Other Wheeled Vehicles in Iron Age Greece J. H. Crouwel, 1992 This study presents evidence for transport by wheeled vehicle in Greece during the Iron Age - largely the Proto-Geometric, Geometric, Orientalising, Archaic and Classical periods (c.1050-330 BC). Sources of information are extensive, with representations from vase paintings, stone and bronze sculpture, and textual sources, such as Homer and inscriptions. Information from archaeological remains is however limited. Crouwel begins by discussing the evidence for roads and draught animals, and then gives a detailed account of chariots, other vehicles, and the history of wheeled vehicles in Iron Age Greece.

learntci: Ebla and its Landscape Paolo Matthiae, Nicoló Marchetti, 2016-06-16 The discovery of 17,000 tablets at the mid-third millennium BC site of Ebla in Syria has revolutionized the study of

the ancient Near East. This is the first major English-language volume describing the multidisciplinary archaeological research at Ebla. Using an innovative regional landscape approach, the 29 contributions to this expansive volume examine Ebla in its regional context through lenses of archaeological, textual, archaeobiological, archaeometric, geomorphological, and remote sensing analysis. In doing so, they are able to provide us with a detailed picture of the constituent elements and trajectories of early state development at Ebla, essential to those studying the ancient Near East and to other archaeologists, historians, anthropologists, and linguists. This work was made possible by an IDEAS grant from the European Research Council.

learntci: Early Riders Robert Drews, 2004-08-02 In this wide-ranging and often controversial book, Robert Drews examines the question of the origins of man's relations with the horse. He questions the belief that on the Eurasian steppes men were riding in battle as early as 4000 BC, and suggests that it was not until around 900 BC that men anywhere - whether in the Near East and the Aegean or on the steppes of Asia - were proficient enough to handle a bow, sword or spear while on horseback. After establishing when, where, and most importantly why good riding began, Drews goes on to show how riding raiders terrorized the civilized world in the seventh century BC, and how central cavalry was to the success of the Median and Persian empires. Drawing on archaeological, iconographic and textual evidence, this is the first book devoted to the question of when horseback riders became important in combat. Comprehensively illustrated, this book will be essential reading for anyone interested in the origins of civilization in Eurasia, and the development of man's military relationship with the horse.
