Sample Questions and Answer Formats

Reviewing sample questions and answers in PDF format aids in familiarizing students with exam expectations and question styles.

Multiple-Choice Question Example

Question: Which of the following best describes the pathophysiology of acute inflammation?

1. Activation of adaptive immune responses exclusively
2. Vasodilation, increased vascular permeability, and leukocyte infiltration
3. Fibrosis and scar formation immediately after injury
4. Decreased blood flow and tissue necrosis

Answer: Vasodilation, increased vascular permeability, and leukocyte infiltration.

Short Answer Question Example

Question: Explain the role of cytokines in systemic inflammation.

Answer: Cytokines are signaling proteins that mediate and regulate immune responses. In systemic inflammation, they promote fever, mobilize immune cells, and induce acute-phase protein production, contributing to the body's defense mechanisms.

Case-Based Question Example

Scenario: A 55-year-old patient presents with chest pain and shortness of breath. Laboratory tests show elevated cardiac enzymes. Describe the pathophysiological changes occurring in the myocardium during myocardial infarction.

Answer: Myocardial infarction results from ischemia due to coronary artery occlusion, leading to hypoxia and subsequent necrosis of cardiac muscle cells. This triggers an inflammatory response, followed by tissue repair and scar formation, which impairs cardiac function.
