 find the intersection point of two lines by looking at their graphs. They then learn that they can find
 the intersection point by using algebraic methods called substitution and elimination. They use these
 methods to solve a variety of scenarios that can be modeled by two variables and two equations.
 They also learn how to graph systems of linear inequalities. Near the end of the book, they analyze a
 variety of scenarios that involve linear systems, while also getting a preview of nonlinear systems,
 which is a topic they will learn more about in Algebra 2: Book 6. This book builds on Algebra 1: Book

 program. The books are so well organized and the content builds from one lesson to the next. We are
 really impressed and grateful for our boys' understanding of what the math means, not just how to
 get problems right...we should all learn to understand math this way. As the mother of a teenage
 daughter who previously had occasional difficulty in math, it was refreshing to watch her actually
 enjoy her math class and to understand the subject matter without struggling I have three kids that
 have used Summit Math. Using these books, they have more freedom to learn and explore at their
 own pace during class, with notes already incorporated within the book. Teacher testimonials:
 Summit Math allows students to work at their own pace which allows me the opportunity to provide
 individualized attention to those who need it... Summit Math emphasizes understanding concepts
