real estate finance and investments linneman pdf: Global Investment Competitiveness

Report 2017/2018 World Bank Group, 2017-10-25 *The Global Investment Competitiveness report*

presents new insights and evidence on drivers of foreign direct investment (FDI) in developing countries, and FDI's role in development. The report's survey of 750 executives of multinational corporations finds that a business-friendly legal and regulatory environment is a key driver of investment decisions in developing countries, along with political stability, security, and macroeconomic conditions. The report's topic-specific chapters explore the potential of FDI to create new growth opportunities for local firms, assess the power of tax holidays and other fiscal incentives to attract FDI, analyze characteristics of FDI originating in developing countries, and examine the experience of foreign investors in countries affected by conflict and fragility. Three key features of this Global Investment Competitiveness report distinguish it from other publications on FDI. First, its insights are based on a combination of first-hand perspectives of investors, extensive analysis of available data and evidence, and international good practices in investment policy design and implementation. Secondly, rather than exploring broad FDI trends, the report provides detailed and unique analysis of FDI depending on its motivation, sector, geographic origin and destination, and phase of investment. Thirdly, the report offers practical and actionable recommendations to policymakers in developing countries wishing to reform their business climates for increased investment competitiveness. As such, the report is meant to complement other knowledge products of the World Bank Group focused even more explicitly on country-level data, detailed reform diagnostics, and presentation of best practices. We are confident this report will bring value and fresh perspectives to a variety of audiences. To governments and policymakers, including investment promotion professionals, the report offers direct insights into the role of government policies and actions in investors' decision-making. To foreign investors and site location consultants, the report provides information on FDI trends and drivers across sectors and geographies. For academic audiences, the new datasets on investment incentives and FDI motivations enables opportunities for additional research and analysis. Lastly, for development assistance providers and other stakeholders, the report highlights key approaches for maximizing FDI's benefits for development.

real estate finance and investments linneman pdf: *Global Investment Competitiveness Report 2019/2020* World Bank Group, 2020-07-06 The Global Investment Competitiveness Report 2019-2020 provides novel analytical insights, empirical evidence, and actionable recommendations for governments seeking to enhance investor confidence in times of uncertainty. The report's findings and policy recommendations are organized around 3 ICs - they provide guidance to governments on how to increase investments' contributions to their country's development, enhance investor confidence, and foster their economies' investment competitiveness. The report presents results of a new survey of more than 2,400 business executives representing FDI in 10 large developing countries: Brazil, China, India, Indonesia, Malaysia, Mexico, Nigeria, Thailand, Turkey, and Vietnam. The results show that over half of surveyed foreign businesses have already been adversely affected by policy uncertainty, experiencing a decrease in employment, firm productivity, or investment. Foreign investors report that supporting political environments, stable macroeconomic conditions, and conducive regulatory regimes are their top three investment decision factors. Moreover, the report's new global database of regulatory risk shows that predictability and transparency increase investor confidence and FDI flows. The report also assesses the impact of FDI on poverty, inequality, employment, and firm performance using evidence from various countries. It shows that FDI in developing countries yields benefits to their firms and citizens-including more and better-paid jobs-but governments need to be vigilant about possible adverse consequences on income distribution. The report is organized in 5 chapters: Chapter 1 presents the results of the foreign investor survey. Chapter 2 explores the differential performance and development impact of greenfield FDI, local firms acquired by multinational corporations (i.e. brownfield FDI), and domestically-owned firms using evidence from six countries. Chapter 3 assesses the impact of FDI on poverty, inequality, employment and wages, using case study evidence from Ethiopia, Turkey and Vietnam. Chapter 4 presents a new framework to measure FDI regulatory risk that is linked to specific legal and regulatory measures. Chapter 5 focuses on factors for increasing the effectiveness of investment promotion agencies.

real estate finance and investments linneman pdf: *Real Estate Valuation Theory* Ko Wang, Marvin L. Wolverton, 2002-09-30 Is real property appraisal evolving, or have all of the big ideas already been conceived? This question has been circulating among the leaders of the Appraisal Institute during the past several annual meetings, usually encountering little in the way of satisfying answers. This is not too surprising, because grand ideas and new knowledge do not typically evolve from off-hand conversation. They are the product of focused intellectual activity and hours of difficult work. This unquenched thirst for new knowledge is the primary reason for assembling this collection of new manuscripts dealing with valuation theory, which was financially underwritten by the Appraisal Institute. Their generosity and willingness to partner with the American Real Estate Society made this collection of thoughtful and thought provoking essays possible. They are the result of a global response to a worldwide call for papers, and demonstrate that real estate valuation is indeed an international discipline. The United States, Australia and New Zealand, Southeast Asia, the Pacific Rim, and Europe are all represented by this impressive collection of authors. Together, the eighteen essays that make up this volume demonstrate that there are a sufficient number of big ideas to challenge and improve the appraisal profession for years to come. Real Estate Valuation Theory is organized around five categories of intellectual contribution to the whole-appraiser decision making and valuation accuracy, application of nontraditional appraisal techniques such as regression and the minimum-variance grid method, appraising contaminated property, ad valorem tax assessment, and new perspectives on traditional appraisal methods. One common thread is that all of the papers are exceptionally well written and thought provoking.

real estate finance and investments linneman pdf: *Managing Government Property Assets* Olga Kaganova, 2006 Governments own a vast array of real property--from large stretches of land to public housing projects, from water distribution systems and roads to office buildings. Typically, management of public property is highly fragmented, with responsibility for each type of asset falling within a different agency or bureaucracy. In almost all countries, different classes of property are managed according to their own rules, often following traditional practices rather than any assessment of what type of management is appropriate. Over the past decade, however, a new discipline has emerged that examines this important component of public wealth and seeks to apply standards of economic efficiency and effective organizational management. *Managing Government Property Assets* reviews and analyzes this recent wave of activity. The authors draw upon a wide variety of national and local practices, both in countries that have been leaders in management reforms and in countries just beginning to wrestle with the problem. This comparison reveals that the issues of public property management are surprisingly similar in different countries, despite striking differences in institutional contexts and policy solutions.

real estate finance and investments linneman pdf: *Intellectual Property and*

Development Keith E. Maskus, Carsten Fink, 2005-01-01 International policies toward protecting intellectual property rights have seen profound changes over the past two decades. Rules on how to protect patents, copyright, trademarks and other forms of intellectual property have become a standard component of international trade agreements. Most significantly, during the Uruguay Round of multilateral trade negotiations (1986-94), members of what is today the World Trade Organization (WTO) concluded the Agreement on Trade Related Intellectual Property Rights (TRIPS), which sets out minimum standards of protection that most of the world's economies have to respect. How will developing countries fare in this new international environment? Intellectual Property and Development brings together empirical research that assesses the effects of changing intellectual property regimes on various measures of economic and social performance - ranging from international trade, foreign investment and competition, to innovation and access to new technologies. The studies presented point to an important development dimension to the protection of intellectual property. But a one-size fits all approach to intellectual property is unlikely to work. There is need to adjust intellectual property norms to domestic needs, taking into account developing countries' capacity to innovate, technological needs, and institutional capabilities. In addition, governments need to consider a range of complementary policies to maximize the benefits and reduce the costs of reformed intellectual property regulations. This book will be of interest to students and scholars of international law, particularly in the area of intellectual property rights, international trade, and public policy.
