toronto notes 2023 pdf: Probability and Statistics Michael J. Evans, Jeffrey S. Rosenthal, 2004 Unlike traditional introductory math/stat textbooks, Probability and Statistics: The Science of Uncertainty brings a modern flavor based on incorporating the computer to the course and an integrated approach to inference. From the start the book integrates simulations into its theoretical coverage, and emphasizes the use of computer-powered computation throughout.* Math and science majors with just one year of calculus can use this text and experience a refreshing blend of applications and theory that goes beyond merely mastering the technicalities. They'll get a thorough grounding in probability theory, and go beyond that to the theory of statistical inference and its applications. An integrated approach to inference is presented that includes the frequency approach as well as Bayesian methodology. Bayesian inference is developed as a logical extension of likelihood methods. A separate chapter is devoted to the important topic of model checking and this is applied in the context of the standard applied statistical techniques. Examples of data analyses using real-world data are presented throughout the text. A final chapter introduces a number of the most important stochastic process models using elementary methods. *Note: An appendix in the book contains Minitab code for more involved computations. The code can be used by students as templates for their own calculations. If a software package like Minitab is used with the course then no programming is required by the students.

toronto notes 2023 pdf: Bayesian Learning for Neural Networks Radford M. Neal, 2012-12-06 Artificial neural networks are widely used as flexible models for classification and regression

applications, but questions remain about how the power of these models can be safely exploited when training data is limited. This book demonstrates how Bayesian methods allow complex neural network models to be used without fear of the overfitting that can occur with traditional training methods. Insight into the nature of these complex Bayesian models is provided by a theoretical investigation of the priors over functions that underlie them. A practical implementation of Bayesian neural network learning using Markov chain Monte Carlo methods is also described, and software for it is freely available over the Internet. Presupposing only basic knowledge of probability and statistics, this book should be of interest to researchers in statistics, engineering, and artificial intelligence.

toronto notes 2023 pdf: *A Map to the Door of No Return* Dionne Brand, 2024-10-01 Now in its first American edition, Dionne Brand's groundbreaking *A Map to the Door of No Return* has emerged as a modern classic, a highly influential exploration of "being" in the Black Diaspora. Since its first publication in 2001, Dionne Brand's groundbreaking exploration of being in the Black Diaspora, *A Map to the Door of No Return*, has emerged as a modern classic. The door, in Brand's iconic schema, represents the point of rupture where the ancestors of the Black Diaspora departed one world for another: the place where all names were forgotten, and all beginnings recast. "This door," writes Brand, "is not mere physicality. It is a spiritual location . . . Since leaving was never voluntary,

return was, and still may be, an intention, however deeply buried. There is as it says no way in; no return." Through shards of history, memoir, lyrical investigation, and the unwritten experience of so many descendants of those who passed through the door, Brand constructs a map of this indelible region, culminating in an enduring expression, both definitive and seeking, of what it is to live, think, and create in the wake of colonization. With a new preface by the author, and an afterword by Saidiya Hartman.

toronto notes 2023 pdf: The Colonial Problem Lisa Monchalin, 2016-03-08 Indigenous peoples are vastly overrepresented in the Canadian criminal justice system. The Canadian government has framed this disproportionate victimization and criminalization as being an Indian problem. In *The Colonial Problem*, Lisa Monchalin challenges the myth of the Indian problem and encourages readers to view the crimes and injustices affecting Indigenous peoples from a more culturally aware position. She analyzes the consequences of assimilation policies, dishonoured treaty agreements, manipulative legislation, and systematic racism, arguing that the overrepresentation of Indigenous peoples in the Canadian criminal justice system is not an Indian problem but a colonial one.

toronto notes 2023 pdf: Blank Spaces Cass Lennox, 2016-11-14 Absence is as crucial as presence. The decision to stop dating has made Vaughn Hargrave's life infinitely simpler: he has friends, an excellent wardrobe, and a job in the industry he loves. That's all he really needs, especially since sex isn't his forte anyway and no one else seems interested in a purely romantic connection. But when a piece is stolen from his art gallery and insurance investigator Jonah Sondern shows up, Vaughn finds himself struggling with that decision. Jonah wants his men like his coffee: hot, intense, and daily. But Vaughn seems to be the one gay guy in Toronto who doesn't do hookups, which is all Jonah can offer. No way can Jonah give Vaughn what he really wants, not when Jonah barely understands what love is. When another painting goes missing, tension ramps up both on and off the clock. Vaughn and Jonah find themselves grappling not just with stolen art, but with their own differences. Because a guy who wants nothing but romance and a guy who wants nothing but sex will never work—right? Not unless they find a way to fill in the spaces between them. Winner: Best Asexual Contemporary and Historical Romance in the 2017 Rainbow Awards Winner: Best Asexual Book in the 2017 Rainbow Awards An unlikely romance between two beautifully written characters will leave readers swooning. - Kirkus **See this title's page on RiptidePublishing.com for content warnings.**

toronto notes 2023 pdf: Networks, Crowds, and Markets David Easley, Jon Kleinberg, 2010-07-19 Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

toronto notes 2023 pdf: Lecture Notes: Clinical Medicine David Rubenstein, D. Wayne, John R. Bradley, 2003-01-27 Lecture Notes on Clinical Medicine has a long-standing reputation for excellence and is a must-have in the run-up to final examinations and throughout the clinical years. It offers a concise summary of the essential information needed for practising clinical medicine. The book is divided into two sections: Part 1 focuses on the clinical examination of each body system, and Part 2 summarises the core knowledge required for the understanding of specific diseases relevant to each body system. The key to the book's success lies in the first part which is structured and styled very much in the manner of a manual on techniques of physical examination. The book helps the examination candidates carry out an examiner's request to perform a specific examination and hence is an excellent preparation tool for OSCEs. Description of the clinical approach is built around the questions most commonly asked and is designed to get medical students to work systematically as if they have been practising medicine for years. The second part of the book is a short textbook of medicine: a summary of basic clinical facts, organised by body system, and under the usual headings of clinical presentation, investigation and management.

toronto notes 2023 pdf: Closing the Enforcement Gap Leah F. Vosko, The Closing the Enforcement Gap Research Group, 2020-03-03 This manuscript explores the enforcement of employment standards, using a mixed-methods approach to examine Ontario as a case study. Drawing on interviews with workers, community advocates, and enforcement officials as well as new archival research, the manuscript demonstrates that enforcement of the province's Employment Standards Act fails too many workers. In the second part of the manuscript, scholars from the US, UK, Australia, and Quebec present views from elsewhere to compare and contrast their cases with that of Ontario, drawing out a widespread enforcement gap that pervades nearly all aspects of employment standards. In the end, the manuscript surveys innovative enforcement models that are emerging in a number of jurisdictions and sets out a new vision for the enforcement of employment standards.--

toronto notes 2023 pdf: *Speaking the Truth about Oneself* Michel Foucault, 2021-10-07
Speaking the Truth about Oneself is composed of lectures that acclaimed French philosopher Michel Foucault delivered in 1982 at the University of Toronto. As is characteristic of his later work, he is concerned here with the care and cultivation of the self, which becomes the central theme of the second and third volumes of his famous *History of Sexuality*, published in French in 1984, the month of his death, and which are explored here in a striking and typically illuminating fashion. Throughout his career, Foucault had always been interested in the question of how constellations of knowledge and power produce and constitute subjects. But in the last phase of his life, he became especially interested not only in how subjects are constituted by outside forces but in how they constitute themselves. In this lecture series and accompanying seminar, we find Foucault focused on antiquity, starting with classical Greece, the early Roman dynasties, and concluding with fourth- and fifth-century Christian monasticism. Foucault's claim is that, in these periods, we see the development of a new kind of act-speaking the truth (about oneself)-as the locus of a new form of subjectivity, which he deemed important not just for historical reasons but also as something modernity could harness anew or adapt to its own purposes--
