The behavior and properties of an EWE system arise not merely from the properties of its component elements, but also to a large degree also from the nature and intensity of their dynamic interlinkages. This volume helps clarify the complexity of these problems by providing a deeper understanding of the implications of the different aspects of sustainability. This work contains a collection of selected, peer-reviewed and state-of-the-art reflecting papers that were presented at the Third Dubrovnik Conference on Sustainable Development of Energy, Water and Environment Systems that was held in June 5-10, 2005 in Dubrovnik, Croatia.

www quicklaunch: Organizational Behavior and Dynamics Oliver T. Chen, 2009 Organisational Behaviour (OB) is the study and application of knowledge about how people, individuals, and groups act in organisations. It does this by taking a system approach. That is, it interprets people-organisation relationships in terms of the whole person, whole group, whole organisation, and whole social system. Its purpose is to build better relationships by achieving human objectives, organisational objectives, and social objectives. The organisation's base rests on management's philosophy, values, vision and goals. This in turn drives the organisational culture which is composed of the formal organisation, informal organisation, and the social environment. The culture determines the type of leadership, communication, and group dynamics within the organisation. The workers perceive this as the quality of work life which directs their degree of motivation. The final outcomes are performance, individual satisfaction, and personal growth and development. All these elements combine to build the model or framework that the organisation operates from. This book presents carefully selected current research on this subject.
