dl 91b: Origen's Revenge Brian Patrick Mitchell, 2021-10-11 Is the difference of male and female to be completely shaken off so that men and women are no longer men and women but merely human beings? The great seventh-century saint Maximus the Confessor said yes, but such thinking is difficult if not impossible to reconcile with much else in Christian tradition that obliges men and women to live as either men or women. Origen's Revenge contrasts the two main sources of early Christian thinking on male and female: the generally negative view of Greek philosophy, limiting sexual distinction to the body and holding the body in low regard, and the much more positive view of Hebrew Scripture, in which sexual distinction and reproduction are both deemed naturally good and necessary for human existence. These two views account for much of the controversy in early Christianity concerning marriage and monasticism. They also still contribute to current controversies over sex roles, gender identity, and sexual ethics. Origen's Revenge also develops the more Hebrew line of early Christian thought to propose a new understanding of male and female with a firmer grounding in scripture, tradition, theology, and philosophy and with profound implications for all human relationships, whether social, political, or spiritual.

This new volume is necessitated by advances in many vital areas as the field of chemical senses continues to grow at a rapid pace. Most significant is the application of the contemporary electrophysiological technique of patch-clamping, recognition of a second messenger system in chemosensory transduction processes and the identification of hormonal pheromones in fish reproductive behaviour. The last major synthesis of our knowledge about fish chemoreception, *Chemoreception in Fishes*, was published ten years ago (Elsevier, Amsterdam, 1982). In that volume four aspects of fish chemoreception, i.e. morphology of the peripheral chemoreceptors, primary sensory processes, roles in behaviour, and its interactions with environment, were discussed. This book is intended to be helpful to students, scientists and aquaculturists not only as a source book but also as a textbook on chemical senses.
