Discovering the Humanities: A Journey Through Time and Thought

Introduction: What are the Humanities? Why Study Them? Their Relevance in the Modern World.

The humanities encompass the study of human conditions and cultures. They aren't about hard facts and figures, but rather the exploration of human experiences, values, beliefs, and creative expressions throughout history and across cultures. Subjects like literature, philosophy, history, art history, and music are all considered part of the humanities. Unlike STEM fields focused on objective analysis, the humanities emphasize interpretation, critical thinking, and subjective understanding.

Why study the humanities in a tech-driven world? In a world increasingly dominated by technology and data, the humanities offer a crucial counterbalance. They equip us with skills and perspectives essential for navigating complex social and ethical challenges. They foster:

Critical Thinking: The ability to analyze information objectively, identify biases, and form reasoned

judgments. This is crucial in an era of misinformation and propaganda.

Communication Skills: Strong written and oral communication skills are essential for success in any field. The humanities cultivate these skills through analysis, argumentation, and creative expression.

Empathy and Understanding: By studying diverse cultures and perspectives, we develop empathy and a deeper understanding of different viewpoints. This is essential for building bridges and fostering cooperation in a globalized world.

Problem-Solving: The humanities encourage creative thinking and the ability to approach problems from multiple perspectives. This is critical in tackling complex challenges with innovative solutions.

Ethical Reasoning: The humanities help us grapple with complex ethical dilemmas, fostering a stronger moral compass and guiding our actions in a world filled with moral ambiguity.

Cultural Awareness: The humanities provide a window into different cultures, fostering appreciation for diversity and challenging ethnocentric viewpoints.

Personal Growth: The humanities stimulate self-reflection, broadening our understanding of ourselves and our place in the world. They foster intellectual curiosity and a lifelong love of learning.

The relevance of the humanities extends far beyond academic circles. They are essential for informed citizenship, effective leadership, and meaningful contributions to society. A deep understanding of history, philosophy, and culture enables us to participate more fully in democratic processes, engage in meaningful conversations, and make informed decisions about the future.

Chapter 1: Literature - Exploring the Human Condition

Literature, in its myriad forms – poetry, novels, short stories, drama – provides a profound insight into the human condition. Through narrative, character development, and evocative language, literature allows us to explore complex emotions, experiences, and moral dilemmas. Studying literature isn't simply about memorizing plots or identifying literary devices; it's about engaging with the human experience on a deeper level.

Analyzing Literary Works: Critical analysis of literature involves examining various aspects of a text, including:

Themes and Motifs: Identifying recurring ideas and symbols that contribute to the overall meaning.

Character Development: Analyzing the motivations, actions, and relationships of characters.

Narrative Structure: Examining the way the story is told, including plot, point of view, and pacing.

Language and Style: Analyzing the author's use of language, imagery, and figurative language.

Historical and Cultural Context: Understanding the historical and cultural context in which the work was written.

By examining these elements, we gain a richer understanding of the author's intentions, the themes explored, and the significance of the work within a broader literary and cultural context. Classical literature, for example, offers insights into the values and beliefs of ancient civilizations, while modern literature reflects the complexities and challenges of contemporary society. Through studying literature, we can expand our empathy, challenge our assumptions, and gain a deeper understanding of human nature.

Chapter 2: Philosophy - Questioning Existence and Meaning

Philosophy, the love of wisdom, is the systematic inquiry into fundamental questions about existence, knowledge, values, reason, mind, and language. From Socrates' questioning of Athenian society to existentialist explorations of meaning in a seemingly absurd world, philosophy has challenged us to examine our beliefs, values, and assumptions.

Key Philosophical Ideas: Studying philosophy involves engaging with key concepts and thinkers, such as:

Epistemology: The study of knowledge – what constitutes knowledge, how we acquire it, and its limits.

Metaphysics: The study of reality – what exists, the nature of existence, and the relationship between mind and matter.

Ethics: The study of morality – what is good and bad, right and wrong, and how we should live.

Political Philosophy: The study of justice, power, and the ideal form of government.

Logic: The study of valid reasoning and argumentation.

Engaging with philosophical concepts helps us develop critical thinking skills, examine our own beliefs, and construct well-reasoned arguments. It pushes us to question assumptions, to consider alternative perspectives, and to develop a more nuanced understanding of ourselves and the world.

Chapter 3: History - Understanding the Past to Shape the Future

History is more than just a chronology of events; it's an exploration of human experience through time. Studying history equips us with a deeper understanding of the past, enabling us to better understand the present and make more informed decisions about the future.

Analyzing Historical Events: Historical analysis involves:

Primary Sources: Examining original documents, artifacts, and eyewitness accounts to understand events firsthand.

Secondary Sources: Analyzing interpretations and analyses of historical events by historians and scholars.

Contextualization: Understanding the social, political, economic, and cultural context in which events occurred.

Causality: Identifying the causes and consequences of historical events.

Interpretation: Understanding that historical interpretations are subjective and influenced by the perspectives and biases of historians.

By studying history critically, we develop a deeper appreciation for the complexities of human

societies, the interconnectedness of events, and the long-term consequences of actions. History provides valuable lessons, both positive and negative, that can inform our understanding of contemporary challenges and help us shape a more just and equitable future.

Chapter 4: Art History - Visual Narratives of Human Experience

Art history offers a unique lens through which to understand human societies and cultures. From ancient cave paintings to contemporary installations, art reflects the values, beliefs, and experiences of the people who created it.

Analyzing Art: Analyzing art involves examining:

Style and Technique: Identifying the artistic style and techniques employed.

Subject Matter: Understanding the content and meaning of the artwork.

Historical and Cultural Context: Understanding the historical and cultural context in which the artwork was created.

Symbolism and Iconography: Identifying and interpreting symbols and iconographic elements within the artwork.

Patronage and Purpose: Understanding who commissioned the artwork and its intended purpose.

By examining these elements, we can gain a deeper understanding of the artistic intentions, the social and cultural context, and the meaning of the artwork. Art history provides valuable insights into the evolution of human creativity, the development of aesthetic values, and the reflection of societal changes through visual narratives.

Chapter 5: Music - The Universal Language of Emotion

Music, a universal language, transcends cultural barriers and speaks directly to our emotions. From ancient chants to modern symphonies, music has the power to evoke profound emotional responses, express complex ideas, and create a sense of community.

Analyzing Music: Musical analysis involves examining:

Melody and Harmony: Understanding the melodic structure and harmonic progressions.

Rhythm and Meter: Analyzing the rhythmic patterns and metrical organization.

Form and Structure: Examining the overall structure and organization of the musical work.

Instrumentation and Texture: Understanding the instrumental forces and the overall texture of the music.

Cultural and Historical Context: Understanding the historical and cultural context in which the music was created.

By analyzing music, we gain a deeper understanding of its structure, its emotional impact, and its cultural significance. Music offers a unique window into the human experience, revealing the power of sound to communicate emotions, express ideas, and connect individuals across time and space.

Conclusion: The Enduring Value of the Humanities in a Changing World. Applying Humanities Knowledge to Everyday Life.

The humanities are not merely academic pursuits; they are essential tools for navigating the complexities of the modern world. They equip us with the critical thinking, communication, and empathy skills needed to thrive in a rapidly changing environment. By understanding the past, engaging with diverse perspectives, and reflecting on our shared human experience, we can build a more just, equitable, and meaningful future. The knowledge and skills gained from studying the humanities can be applied to various aspects of life, from personal relationships and professional endeavors to civic engagement and global citizenship. In essence, the humanities offer a pathway to a richer, more fulfilling, and more meaningful life.

discovering the humanities pdf: Speculative Everything Anthony Dunne, Fiona Raby, 2013-12-06 How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

discovering the humanities pdf: A Patriot's History of the United States Larry Schweikart, Michael Patrick Allen, 2004-12-29 For the past three decades, many history professors have allowed their biases to distort the way America's past is taught. These intellectuals have searched for instances of racism, sexism, and bigotry in our history while downplaying the greatness of America's patriots and the achievements of “dead white men.” As a result, more emphasis is placed on Harriet Tubman than on George Washington; more about the internment of Japanese Americans during World War II than about D-Day or Iwo Jima; more on the dangers we faced from Joseph McCarthy than those we faced from Josef Stalin. *A Patriot's History of the United States* corrects those doctrinaire biases. In this groundbreaking book, America's discovery, founding, and development are reexamined with an appreciation for the elements of public virtue, personal liberty, and private property that make this nation uniquely successful. This book offers a long-overdue acknowledgment of America's true and proud history.

discovering the humanities pdf: Discovering Prices Paul Milgrom, 2017-05-23 Traditional economic theory studies idealized markets in which prices alone can guide efficient allocation, with no need for central organization. Such models build from Adam Smith's famous concept of an invisible hand, which guides markets and renders regulation or interference largely unnecessary. Yet for many markets, prices alone are not enough to guide feasible and efficient outcomes, and regulation alone is not enough, either. Consider air traffic control at major airports. While prices could encourage airlines to take off and land at less congested times, prices alone do just part of the job; an air traffic control system is still indispensable to avoid disastrous consequences. With just an air traffic controller, however, limited resources can be wasted or poorly used. What's needed in this and many other real-world cases is an auction system that can effectively reveal prices while still maintaining enough direct control to ensure that complex constraints are satisfied. In *Discovering Prices*, Paul Milgrom—the world's most frequently cited academic expert on auction design—describes how auctions can be used to discover prices and guide efficient resource allocations, even when resources are diverse, constraints are critical, and market-clearing prices may not even exist. Economists have long understood that externalities and market power both necessitate market organization. In this book, Milgrom introduces complex constraints as another reason for market design. Both lively and technical, Milgrom roots his new theories in real-world examples (including the ambitious U.S. incentive auction of radio frequencies, whose design he led) and provides economists with crucial new tools for dealing with the world's growing complex resource-allocation problems.

discovering the humanities pdf: Closing of the American Mind Allan Bloom, 2008-06-30 The brilliant, controversial, bestselling critique of American culture that "hits with the approximate force and effect of electroshock therapy" (The New York Times)—now featuring a new afterword by Andrew Ferguson in a twenty-fifth anniversary edition. In 1987, eminent political philosopher Allan Bloom published *The Closing of the American Mind*, an appraisal of contemporary America that "hits with the approximate force and effect of electroshock therapy" (The New York Times) and has not only been vindicated, but has also become more urgent today. In clear, spirited prose, Bloom argues that the social and political crises of contemporary America are part of a larger intellectual crisis: the result of a dangerous narrowing of curiosity and exploration by the university elites. Now, in this twenty-fifth anniversary edition, acclaimed author and journalist Andrew Ferguson contributes a new essay that describes why Bloom's argument caused such a furor at publication and why our culture so deeply resists its truths today.

The twenty-four chapters in this volume, reflecting the work of scholars in Europe, Australasia, and North and South America, were selected from the over 400 presentations at SIGET IV (the Fourth International Symposium on Genre Studies) held on the campus of UNISUL in Tubarão, Santa Catarina, Brazil in August 2007—the largest gathering on genre to that date. The chapters also represent a wide variety of approaches, including rhetoric, Systemic Functional Linguistics, media and critical cultural studies, sociology, phenomenology, enunciation theory, the Geneva school of educational sequences, cognitive psychology, relevance theory, sociocultural psychology, activity theory, Gestalt psychology, and schema theory. Sections are devoted to theoretical issues, studies of genres in the professions, studies of genre and media, teaching and learning genre, and writing across the curriculum. The broad selection of material in this volume displays the full range of contemporary genre studies and sets the ground for a next generation of work.

discovering the humanities pdf: Democracy and Education John Dewey, 1916 . *Renewal of Life by Transmission*. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than

the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word control in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

discovering the humanities pdf: Shaping Written Knowledge Charles Bazerman, 1988 The forms taken by scientific writing help to determine the very nature of science itself. In this closely reasoned study, Charles Bazerman views the changing forms of scientific writing as solutions to rhetorical problems faced by scientists arguing for their findings. Examining such works as the early Philosophical Transactions and Newton's optical writings as well as Physical Review, Bazerman views the changing forms of scientific writing as solutions to rhetorical problems faced by scientists. The rhetoric of science is, Bazerman demonstrates, an embedded part of scientific activity that interacts with other parts of scientific activity, including social structure and empirical experience. This book presents a comprehensive historical account of the rise and development of the genre, and views these forms in relation to empirical experience.

discovering the humanities pdf: Interdisciplining Digital Humanities Julie Thompson Klein, 2015-01-05 Interdisciplining Digital Humanities sorts through definitions and patterns of practice over roughly sixty-five years of work, providing an overview for specialists and a general audience alike. It is the only book that tests the widespread claim that Digital Humanities is interdisciplinary. By examining the boundary work of constructing, expanding, and sustaining a new field, it depicts both the ways this new field is being situated within individual domains and dynamic cross-fertilizations that are fostering new relationships across academic boundaries. It also accounts for digital reinvigorations of "public humanities" in cultural heritage institutions of museums, archives, libraries, and community forums.

discovering the humanities pdf: Planned Obsolescence Kathleen Fitzpatrick, 2011 Academic institutions are facing a crisis in scholarly publishing at multiple levels: presses are stressed as never before, library budgets are squeezed, faculty are having difficulty publishing their work, and promotion and tenure committees are facing a range of new ways of working without a clear sense of how to understand and evaluate them. Planned Obsolescence is both a provocation to think more broadly about the academy's future and an argument for re-conceiving that future in

more communally-oriented ways. Facing these issues head-on, Kathleen Fitzpatrick focuses on the technological changes especially greater utilization of internet publication technologies, including digital archives, social networking tools, and multimedia necessary to allow academic publishing to thrive into the future. But she goes further, insisting that the key issues that must be addressed are social and institutional in origin. Confronting a change-averse academy, she insists that before we can successfully change the systems through which we disseminate research, scholars must re-evaluate their ways of working how they research, write, and review while administrators must reconsider the purposes of publishing and the role it plays within the university. Springing from original research as well as Fitzpatrick's own hands-on experiments in new modes of scholarly communication through MediaCommons, the digital scholarly network she co-founded, *Planned Obsolescence* explores all of these aspects of scholarly work, as well as issues surrounding the preservation of digital scholarship and the place of publishing within the structure of the contemporary university. Written in an approachable style designed to bring administrators and scholars into a conversation, *Planned Obsolescence* explores both symptom and cure to ensure that scholarly communication will remain vibrant and relevant in the digital future.

discovering the humanities pdf: Qualitative Research from Start to Finish, First Edition

Robert K. Yin, 2011-09-26 This lively, practical text presents a fresh and comprehensive approach to doing qualitative research. The book offers a unique balance of theory and clear-cut choices for customizing every phase of a qualitative study. Readers learn about adaptive ways of designing studies, collecting data, analyzing data, and reporting findings. Key aspects of the researcher's craft are addressed, such as fieldwork options, the five phases of data analysis (with and without using computer-based software), and how to incorporate the researcher's "declarative" and "reflective" selves into a final report. Ideal for graduate-level courses, the text includes: * Discussions of ethnography, grounded theory, phenomenology, feminist research, and other approaches. * Instructions for creating a study bank to get a new study started. * End-of-chapter exercises and a semester-long, field-based project. * Quick study boxes, research vignettes, sample studies, and a glossary. * Previews for sections within chapters, and chapter recaps. * Discussion of the place of qualitative research among other social science methods, including mixed methods research.

discovering the humanities pdf: Kama Muta Alan Page Fiske, 2019-11-26

This book describes a ubiquitous and potent emotion that has only rarely and recently been studied in any systematic manner. The words that come closest to denoting it in English are being moved or touched, having a heart-warming feeling, feeling nostalgic, feeling patriotic, or pride in family or team. In religious contexts when the emotion is intense, it may be labeled ecstasy, mystical rapture, burning in the bosom, or being touched by the Spirit. All of these are instances of what scientists now call 'kama muta' (Sanskrit, 'moved by love'). Alan Page Fiske shows that what evokes this emotion is the sudden creation, intensification, renewal, repair, or recall of a communal sharing relationship - when love ignites, or people feel newly connected. He explains the social, psychological, cultural, and likely evolutionary processes involved - and how they interlock. Kama muta is described as it manifests in diverse settings at many points in history across scores of cultures, in everyday experiences as well as the peak moments of life. The chapters illuminate the occurrence of kama muta in a range of contexts, including religion, oratory, literature, sport, social media, and nature. The book will be of interest to students and scholars from a number of disciplines who are interested in emotion or social relationships. discovering the humanities pdf: The Wisdom Of Finance Mihir Desai, 2017-05-23

"Entertaining and informative. Desai takes us on a journey through the fundamentals of finance, from asset pricing to risk and risk management, via options, mergers, debt, and bankruptcy.- John Lanchester, *The New Yorker* A fascinating new perspective on modern finance, --Oliver Hart, 2016 Nobel Laureate in Economics Lucid, witty and delightfully erudite...From the French revolution to

film noir, from the history of probability to Jane Austen and The Simpsons, this is an astonishing intellectual feast. --Sebastian Mallaby, author of The Man Who Knew: The Life and Times of Alan Greenspan Longlisted for 2017 Financial Times/McKinsey Business Book of the Year A 2017 AMAZON PICK IN BUSINESS & LEADERSHIP A WealthManagement.com BEST BUSINESS BOOK OF 2017 In 1688, essayist Josef de la Vega described finance as both “the fairest and most deceitful business . . . the noblest and the most infamous in the world, the finest and most vulgar on earth.” The characterization of finance as deceitful, infamous, and vulgar still rings true today – particularly in the wake of the 2008 financial crisis. But, what happened to the fairest, noblest, and finest profession that de la Vega saw? De la Vega hit on an essential truth that has been forgotten: finance can be just as principled, life-affirming, and worthy as it can be fraught with questionable practices. Today, finance is shrouded in mystery for outsiders, while many insiders are uneasy with the disrepute of their profession. How can finance become more accessible and also recover its nobility? Harvard Business School professor Mihir Desai, in his “last lecture” to the graduating Harvard MBA class of 2015, took up the cause of restoring humanity to finance. With incisive wit and irony, his lecture drew upon a rich knowledge of literature, film, history, and philosophy to explain the inner workings of finance in a manner that has never been seen before. This book captures Desai’s lucid exploration of the ideas of finance as seen through the unusual prism of the humanities. Through this novel, creative approach, Desai shows that outsiders can access the underlying ideas easily and insiders can reacquaint themselves with the core humanity of their profession. The mix of finance and the humanities creates unusual pairings: Jane Austen and Anthony Trollope are guides to risk management; Jeff Koons becomes an advocate of leverage; and Mel Brooks’s The Producers teaches us about fiduciary responsibility. In Desai’s vision, the principles of finance also provide answers to critical questions in our lives. Among many surprising parallels, bankruptcy teaches us how to react to failure, the lessons of mergers apply to marriages, and the Capital Asset Pricing Model demonstrates the true value of relationships. THE WISDOM OF FINANCE is a wholly unique book, offering a refreshing new perspective on one of the world’s most complex and misunderstood professions.

discovering the humanities pdf: Twenty-One Genres and How to Write Them Brock Dethier, 2013-04-15 In this classroom-tested approach to writing, Brock Dethier teaches readers how to analyze and write twenty-one genres that students are likely to encounter in college and beyond. This practical, student-friendly, task-oriented text confidently guides writers through step-by-step processes, reducing the anxiety commonly associated with writing tasks. In the first section, Dethier efficiently presents each genre, providing models, a description of the genres’ purpose, context, and discourse; and suggestions for writing activities or “moves” that writers can use to get words on the page and accomplish their writing tasks. The second section explains these moves, over two hundred of them, in chapters ranging from “Solve Your Process Problems” and “Discover” to “Revise” and “Present.” Applicable to any writing task or genre, these moves help students overcome writing blocks and develop a piece of writing from the first glimmers of an idea to its presentation. This approach to managing the complexity and challenge of writing in college strives to be useful, flexible, eclectic, and brief—a valuable resource for students learning to negotiate unfamiliar writing situations.

discovering the humanities pdf: Revisiting Discovery and Justification Jutta Schickore, Friedrich Steinle, 2006-04-18 The distinction between the contexts of discovery and justification has left a turbulent wake in the philosophy of science. The discussion clears the ground for the productive and fruitful integration of these new developments into philosophy of science.

discovering the humanities pdf: Radical Embodied Cognitive Science Anthony Chemero, 2011-08-19 A proposal for a new way to do cognitive science argues that cognition should be described in terms of agent-environment dynamics rather than computation and representation. While philosophers of mind have been arguing over the status of mental representations in cognitive science, cognitive scientists have been quietly engaged in studying perception, action, and cognition without explaining them in terms of mental representation. In this book, Anthony Chemero describes this nonrepresentational approach (which he terms radical embodied cognitive science), puts it in historical and conceptual context, and applies it to traditional problems in the philosophy of mind. Radical embodied cognitive science is a direct descendant of the American naturalist psychology of William James and John Dewey, and follows them in viewing perception and cognition to be understandable only in terms of action in the environment. Chemero argues that cognition should be described in terms of agent-environment dynamics rather than in terms of computation and representation. After outlining this orientation to cognition, Chemero proposes a methodology: dynamical systems theory, which would explain things dynamically and without reference to representation. He also advances a background theory: Gibsonian ecological psychology, “shored up” and clarified. Chemero then looks at some traditional philosophical problems (reductionism, epistemological skepticism, metaphysical realism, consciousness) through the lens of radical embodied cognitive science and concludes that the comparative ease with which it resolves these problems, combined with its empirical promise, makes this approach to cognitive science a rewarding one. “Jerry Fodor is my favorite philosopher,” Chemero writes in his preface, adding, “I think that Jerry Fodor is wrong about nearly everything.” With this book, Chemero explains

nonrepresentational, dynamical, ecological cognitive science as clearly and as rigorously as Jerry Fodor explained computational cognitive science in his classic work *The Language of Thought*.

discovering the humanities pdf: How We Know What Isn't So Thomas Gilovich, 2008-06-30 Thomas Gilovich offers a wise and readable guide to the fallacy of the obvious in everyday life. When can we trust what we believe—that teams and players have winning streaks, that flattery works, or that the more people who agree, the more likely they are to be right—and when are such beliefs suspect? Thomas Gilovich offers a guide to the fallacy of the obvious in everyday life. Illustrating his points with examples, and supporting them with the latest research findings, he documents the cognitive, social, and motivational processes that distort our thoughts, beliefs, judgments and decisions. In a rapidly changing world, the biases and stereotypes that help us process an overload of complex information inevitably distort what we would like to believe is reality. Awareness of our propensity to make these systematic errors, Gilovich argues, is the first step to more effective analysis and action.

discovering the humanities pdf: Exploration of the Seas National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Exploration of the Seas, 2003-11-04 In the summer of 1803, Thomas Jefferson sent Meriwether Lewis and William Clark on a

journey to establish an American presence in a land of unqualified natural resources and riches. Is it fitting that, on the 200th anniversary of that expedition, the United States, together with international partners, should embark on another journey of exploration in a vastly more extensive region of remarkable potential for discovery. Although the oceans cover more than 70 percent of our planet's surface, much of the ocean has been investigated in only a cursory sense, and many areas have not been investigated at all. Exploration of the Seas assesses the feasibility and potential value of implementing a major, coordinated, international program of ocean exploration and discovery. The study committee surveys national and international ocean programs and strategies for cooperation between governments, institutions, and ocean scientists and explorers, identifying strengths, weaknesses, and gaps in these activities. Based primarily on existing documents, the committee summarizes priority areas for ocean research and exploration and examines existing plans for advancing ocean exploration and knowledge.

discovering the humanities pdf: The Art of Being Human Michael Wesch, 2018-08-07 Anthropology is the study of all humans in all times in all places. But it is so much more than that. Anthropology requires strength, valor, and courage, Nancy Scheper-Hughes noted. Pierre Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a heroic profession. What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology.
