Divided into three sections, the book first explores aging and oral health, including age-related changes, epidemiology, nutrition, dysphagia, aspiration pneumonia, xerostomia and hyposalivation, management of periodontal disease and caries, systemic diseases that influence oral health, and considerations for chronic orofacial pain. The second section illuminates the ways in which frailty and other geriatric syndromes influence oral health care in older adults with a special focus on frailty, dementia, delirium and depression, and the delivery of oral health care to vulnerable geriatric populations in long-term care, home care, palliative care, and hospice.
