fort hood calendar 2023: **Korean Showdown** Bryan R. Gibby, 2021-01-12 A historical analysis of the policies and military strategies applied during the Korean War stalemate period Korean Showdown: National Policy and Military Strategy in a Limited War, 1951-1952 takes a holistic and integrative approach to strategy, operations, and tactics during the Korean War's stalemate period and demonstrates how these matters shaped each other and influenced, or were influenced by, political and strategic policy decision-making. Bryan R. Gibby offers an analysis of the major political and military decisions affecting how the war was conducted operationally and diplomatically by examining American, Chinese, North Korean, and South Korean operations in the context of fighting a limited war with limited means, but for objectives that were not always limited in scope or ambition. The foundational political decision was Harry Truman's voluntary repatriation policy, which extended the war by up to eighteen months. Its military counterpart was the American-led Operation Showdown, the last deliberate military offensive to coerce concessions at the negotiation table. Showdown's failure (and the Communists' own equally disappointing military efforts) opened up new avenues for solving the war short of a militarily imposed solution. Gibby's research draws on primary sources from American, Korean, and Chinese archives and publications. Many of these sources have not yet been mined in diplomatic and military histories of the Korean War. This innovative book also addresses a significant gap in the study of Korean military operations—the linkage between ground and air pressure campaigns, as well as the many Chinese and American operations conducted to establish negotiation positions. Gibby also explores many political and propagandist developments that assumed great importance in the summer of 1952, such as prisoner of war riots, the bombing of hydroelectric dams, and the South Korean constitutional crisis, which significantly influenced American and Chinese military decision-making. Ultimately, this volume serves as a cautionary analysis of the limits of force, the necessity to understand an adversary, and the importance of strategic consensus. It also offers an effective case study on an underappreciated period of civil-military tension during the Cold War and on how civilian politicians and military leaders must collaborate to determine a realistic and effective strategy.

fort hood calendar 2023: **The Will to Win** Bryan R. Gibby, 2012-07-02 The Will to Win focuses on the substantial role of US military advisors to the Republic of Korea Army (ROKA) from 1946 until 1953 in one of America's early attempts at nation building. Gibby describes ROKA's structure, mission, challenges, and successes, thereby linking the South Korean army and their US advisors to the traditional narrative of this "forgotten war." The work also demonstrates the difficulties inherent in national reconstruction, focusing on barriers in culture and society, and the effects of rapid decolonization combined with intense nationalism and the appeal of communism to East Asia following the destruction of the Japanese empire. Key conclusions include the importance of individual advisors, the significance of the prewar advisory effort, and the depth of the impact these men had on individual Korean units and in a few cases on the entire South Korean army. The success or failure of South Korean government in the decade following the end of World War II

hinged on the loyalty, strength, and fighting capability of its army, which in turn relied on its American advisors. Gibby argues that without a proficient ROKA, the 1953 armistice, still in effect today, would not have been possible. He reexamines the Korean conflict from its beginning in 1945—particularly Korean politics, military operations, and armed forces—and demonstrates the crucial role the American military advisory program and personnel played to develop a more competent and reliable Korean army.

fort hood calendar 2023: *Closer Than You Think* Samuel R. White Jr., 2017 The Defense Innovation Initiative (DII), begun in November 2014 by former Secretary of Defense Chuck Hagel, is intended to ensure U.S. military superiority throughout the 21st century. The DII seeks broad-based innovation across the spectrum of concepts, research and development, capabilities, leader development, wargaming, and business practices. An essential component of the DII is the Third Offset Strategy-a plan for overcoming (offsetting) adversary parity or advantage, reduced military force structure, and declining technological superiority in an era of great power competition. This study explored the implications for the Army of Third Offset innovations and breakthrough capabilities for the operating environment of 2035-2050. It focused less on debating the merits or feasibility of individual technologies and more on understanding the implications-the second and third order effects on the Army that must be anticipated ahead of the breakthrough.
